What we request

Strategic-project application for rare-earth / lithium / antimony processed-product flowsheets

We fuse hyperspectral imaging, satellite feeds, quantum-enhanced AI, structural simulation and custodial blockchain finance into one platform for sustainable agriculture, earthquake-safe urban renewal and auditable public services in Türkiye. Every measurement, contract, pickup and payment is SHA-256 anchored, so citizens, municipalities and funders look at the same evidence.

Pillar fit

Sustainable Mining — High-Value Rare & Strategic Elements · **live · reference prices**

Hyperspectral SWIR mineral mapping, kriged resource inventory, cut-off and NPV economics, tailings / acid-mine-drainage risk and a rehabilitation score; flowsheets that sell processed product — not raw ore — for rare earths, lithium, antimony, tungsten, graphite and boron.

- Supply-risk × economic-importance matrix aligned with the EU Critical Raw Materials list
- Price-feed-linked NPV; planners alerted automatically when a project flips sign
- Province reports, settlement-buffer zoning verdicts adopted via Justice attestations

How to verify

Every row carries a SHA-256 anchor written to the platform ledger when the record was created. Open the verification link, or upload the attached PDF at https://spaceseax.tech/verify/report to compare its hash with the archived copy. KPI values are live counts; the annex content hash is printed in the footer so two copies can be compared.

Every number in this summary is read live from the platform database; the text is deterministic (no LLM) and sealed with a content hash + SHA-256 anchor. Evidence: the anchored ledger, a PDF archive with verification links, council receipt stamps, laboratory and probe calibration records.

Detection plan

1. Sentinel-2 / EnMAP SWIR regional screening for gossan (jarosite 2265 nm) and argillic alteration (2165–2200 nm)
2. UAV hyperspectral terrain scan of Küre–Hanönü alteration halos (5 cm GSD)
3. downhole hyperspectral probe logging of exploration boreholes for Cu-Co sulphide and Mn-oxide indices
4. open-pit & quarry monitoring of carbonate / silica purity (2340 nm calcite depth) for industrial-mineral grading
